

CONVENE

for CITIES

CONVENE PRODUCT SUITE

Convene ERP / DXP is a dual-focused platform, integrating Enterprise Resource Planning (ERP) and Digital Experience (DXP) functionalities. It provides a cohesive technical framework for building multiple products and applications. Our strategy emphasizes standardization, efficiency, security, compliance, and personalization, making Convene a universal intelligent business platform. Investing in platforms like Convene enables companies to develop, improve, upgrade, and customize products faster and more cost-effectively than building stand-alone solutions.

Benefits of Convene include:

- Comprehensive enterprise-level software suite
- Centralized data management
- Seamless cross-product and platform integration
- Advanced intelligence and analytics
- Strategic scalability, interoperability, mobility, and automation
- Secure AI and machine learning
- Relationship-centric design
- Robust security and compliance

CONVENE ENGAGE

Convene's Engage Module is a powerful and versatile software platform that allows people to come together and build vibrant communities. With customizable groups that feature membership options, events, topics, and activity streams, Engage provides everything you need to create a thriving community.

Whether you're looking to connect with like-minded individuals, build a professional network, or simply share your interests and passions with others, Engage is the perfect tool for the job. With its intuitive and easy-to-use interface, you can quickly and easily create a community that meets your specific needs and goals. Smart communities start here!

ADMINISTRATION

Features associated with the administration of Engage

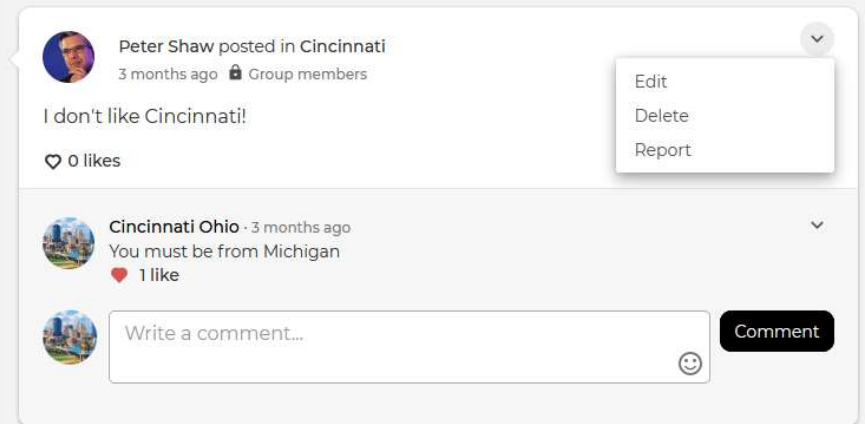

COMMUNITY MODERATION

Convене ERP/DXP's package enables community moderation which refers to the ability to clean up inappropriate content within the community.

Benefits of Convене include:

- **Community Moderators:** Enjoy global access to view and edit all groups and content within the community.
- **Community Members:** Through content flagging, community members can report content as inappropriate which alerts moderators to take action.
- **Coming Next Gen:** CRM, AI and machine learning moderation is in the developer's backlog

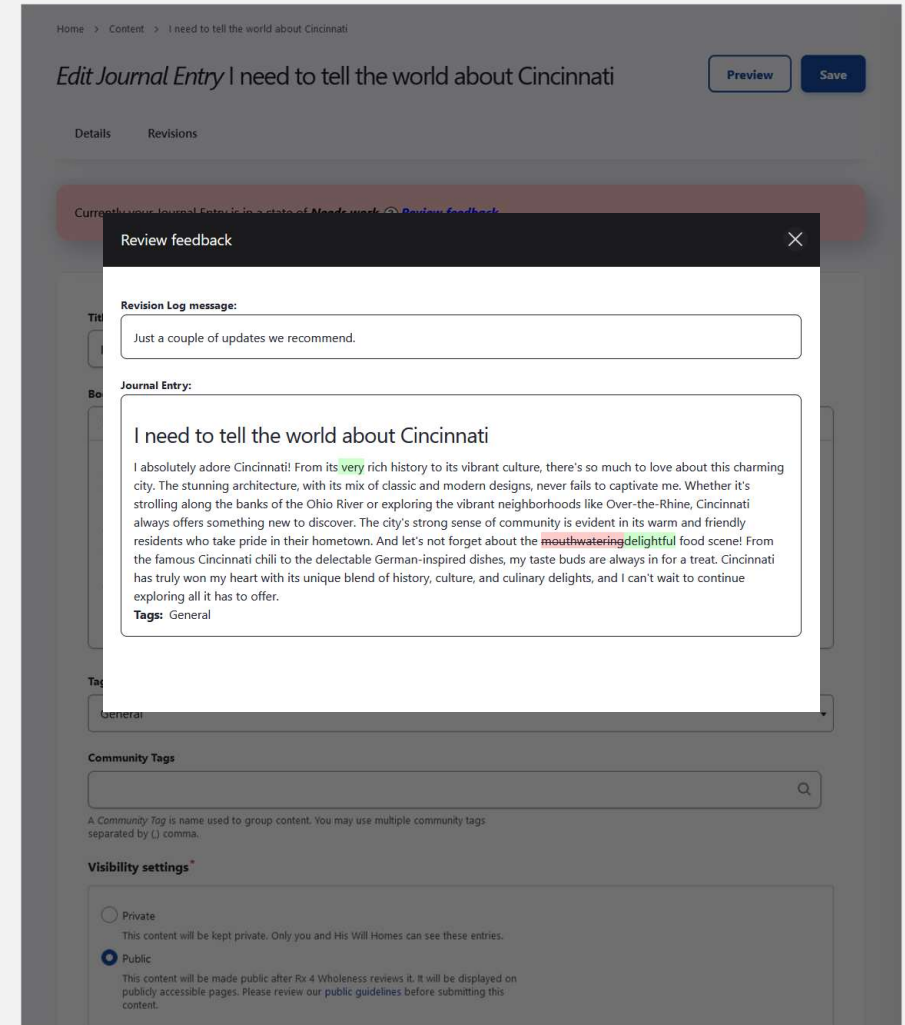

CONTENT MODERATION

Convене ERP/DXP's content moderation is a workflow that is implemented to add a review step before content is made public. This workflow allows for moderators to reject content and submit it back to the user with corrections or to approve it to be public.

Benefits of Convене include:

- **Moderation Workflow:** Optionally put website content through a moderation workflow that requires approval before being published.
- **Moderator Role:** Moderators have access to a content moderation dashboard which displays all content submitted to be public. Moderators can then review and edit content before it is made public.
- **Comment Moderation:** Manage and approve comments made on the website. Comments by default are public but moderators have access to an "All Comments" dashboard that helps to present them in one place for review.

ANALYTICS

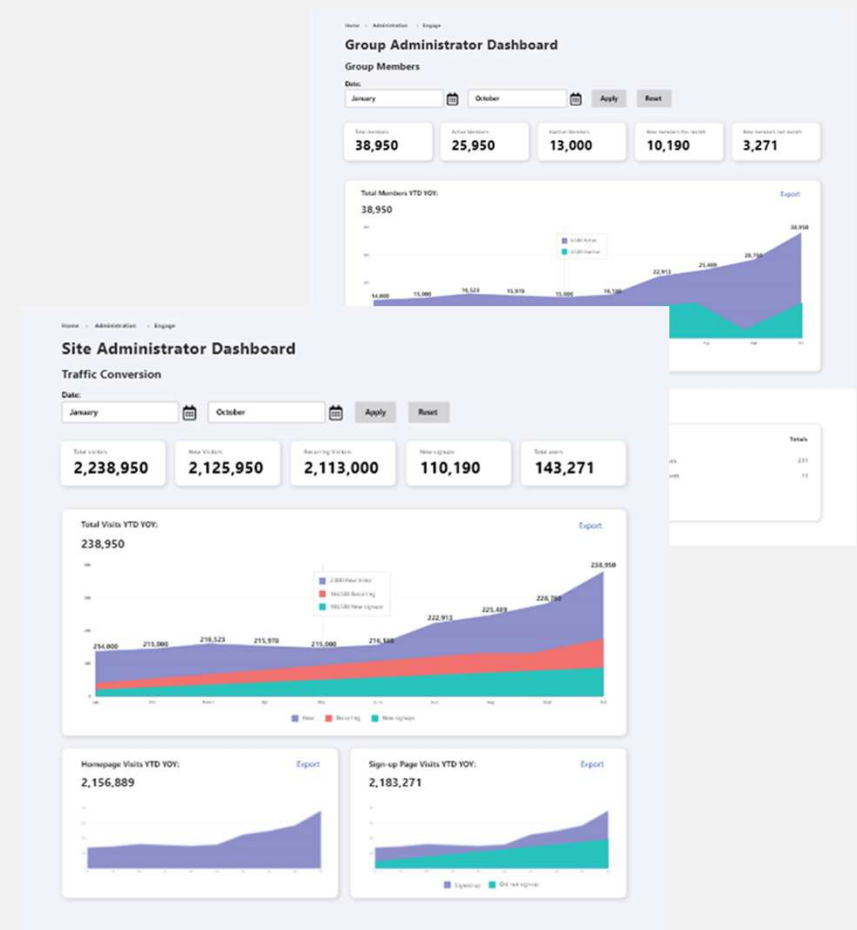

Benefits of Convene include:

Google Analytics: Integration with Google Analytics allows for tracking on public pages for website visits, behaviors, session duration, and more.

Compass Analytics: Integrations with Compass Allegiance allows for tracking private analytics for HIPAA compliance or trusted business confidence without sharing information with 3rd parties.

Compass BI & Analytics: No matter what or how many CRM, PoS, ERP, Inventory Mgt., Apps or other data systems you need; Compass Enterprise empowers all your system integrations and unification. Enjoying 100% of your systems working together in real-time provides measurable success through dashboards, KPIs, alerts, notifications and personalized reports delivered to your desired device.

Group Reports: (coming Q3/2024) – Allows group admins to see analytics about their group's performance.

CONVENE'S MODEL FOR UNIFICATION

OMNIPOINT 360 is a comprehensive solution that unifies disparate systems into a single data silo. This integration enhances efficiency and accelerates data summarization and presentation. Tasks and reports that typically require extensive resources are completed in seconds, saving time, money, and manpower.

OMNIPOINT 360 is the **Dynamic Directive(TM)** service solution that manages your evolving workflow with consistency and standardization, eliminating chaos. This process clarifies the necessary steps, allowing you to focus on your goals without interruption.

THANK YOU
