

CONVENE

for CITIES

CONVENE PRODUCT SUITE

Convene ERP / DXP is a dual-focused platform, integrating Enterprise Resource Planning (ERP) and Digital Experience (DXP) functionalities. It provides a cohesive technical framework for building multiple products and applications. Our strategy emphasizes standardization, efficiency, security, compliance, and personalization, making Convene a universal intelligent business platform. Investing in platforms like Convene enables companies to develop, improve, upgrade, and customize products faster and more cost-effectively than building stand-alone solutions.

Benefits of Convene include:

- Comprehensive enterprise-level software suite
- Centralized data management
- Seamless cross-product and platform integration
- Advanced intelligence and analytics
- Strategic scalability, interoperability, mobility, and automation
- Secure AI and machine learning
- Relationship-centric design
- Robust security and compliance

CONVENE ENGAGE

Convene's Engage Module is a powerful and versatile software platform that allows people to come together and build vibrant communities. With customizable groups that feature membership options, events, topics, and activity streams, Engage provides everything you need to create a thriving community.

Whether you're looking to connect with like-minded individuals, build a professional network, or simply share your interests and passions with others, Engage is the perfect tool for the job. With its intuitive and easy-to-use interface, you can quickly and easily create a community that meets your specific needs and goals. Smart communities start here!

GROUP HIERARCHY

Features associated with the groups and forming
group relationships

RELATIONSHIP RULES

Convene ERP/DXP rich commitment to utilizing business rules allows one group's organization to work differently than other groups preferences. You don't change the way you work due to technology. The technology blends in and works the way you want and need.

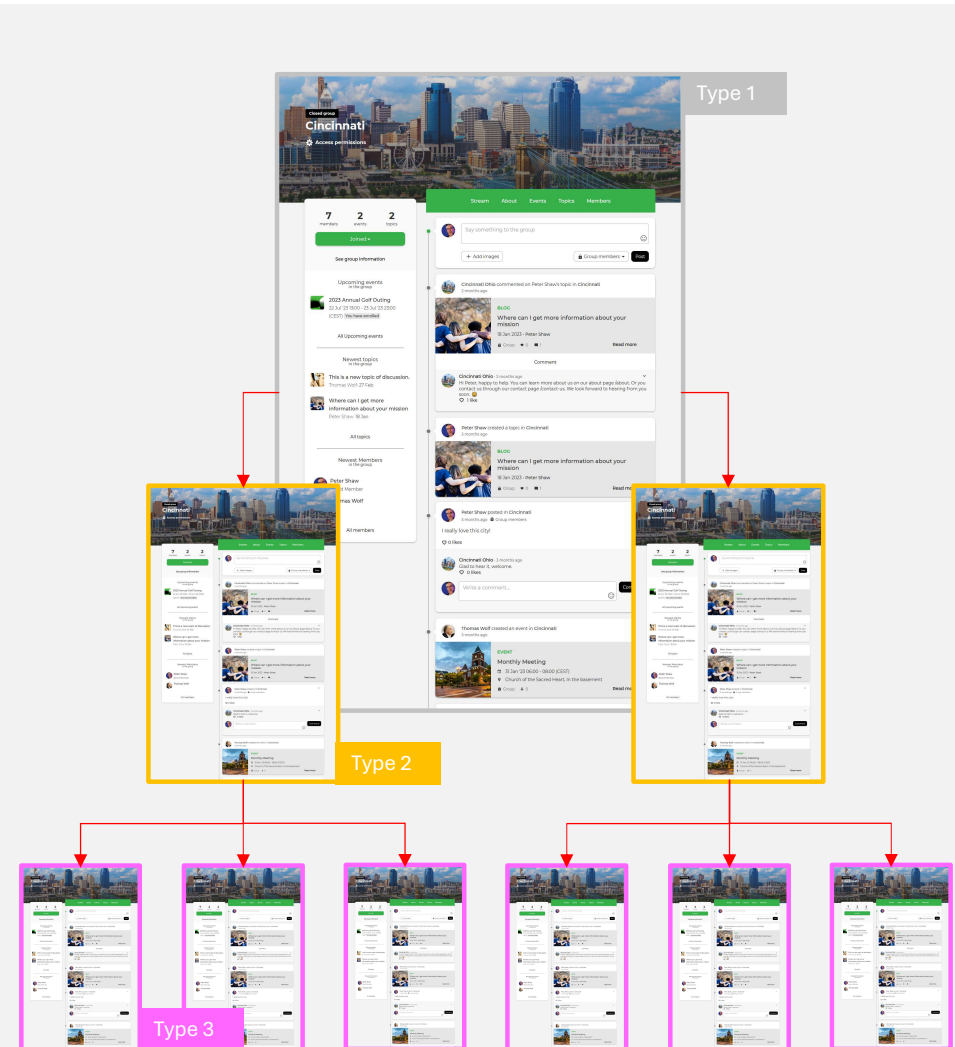

Benefits of Convene include:

Group types: Create different types of groups that can be related to other group types.

Custom Relationships: Define how groups relate to one another through custom relationships.

Content sharing: Groups within a relationship can be configured to share content with one another.

Member sharing: Groups within a relationship can allow members to automatically join other groups based on the configured membership rules.

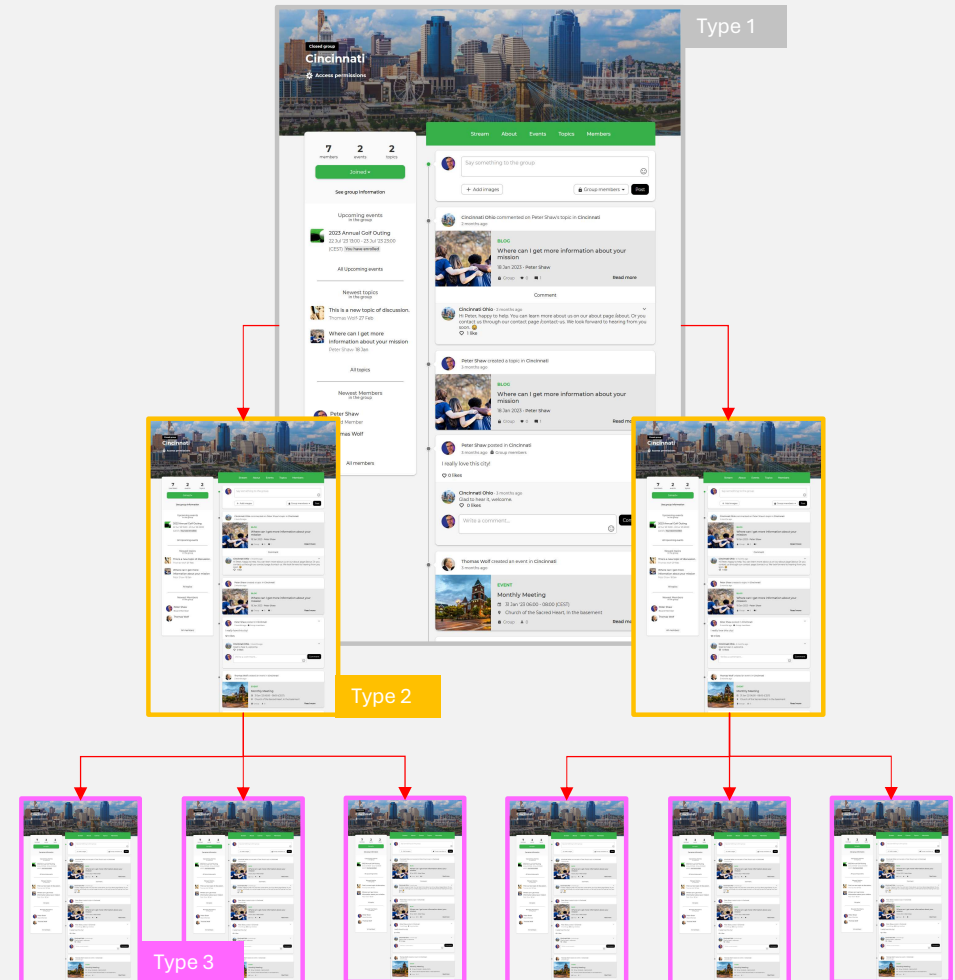

GROUP RELATIONSHIPS

Convене ERP/DXP's hierarchical structures enable administrators to define a set of rules that allows the user to determine what happens between different relationships.

Benefits of Convене include:

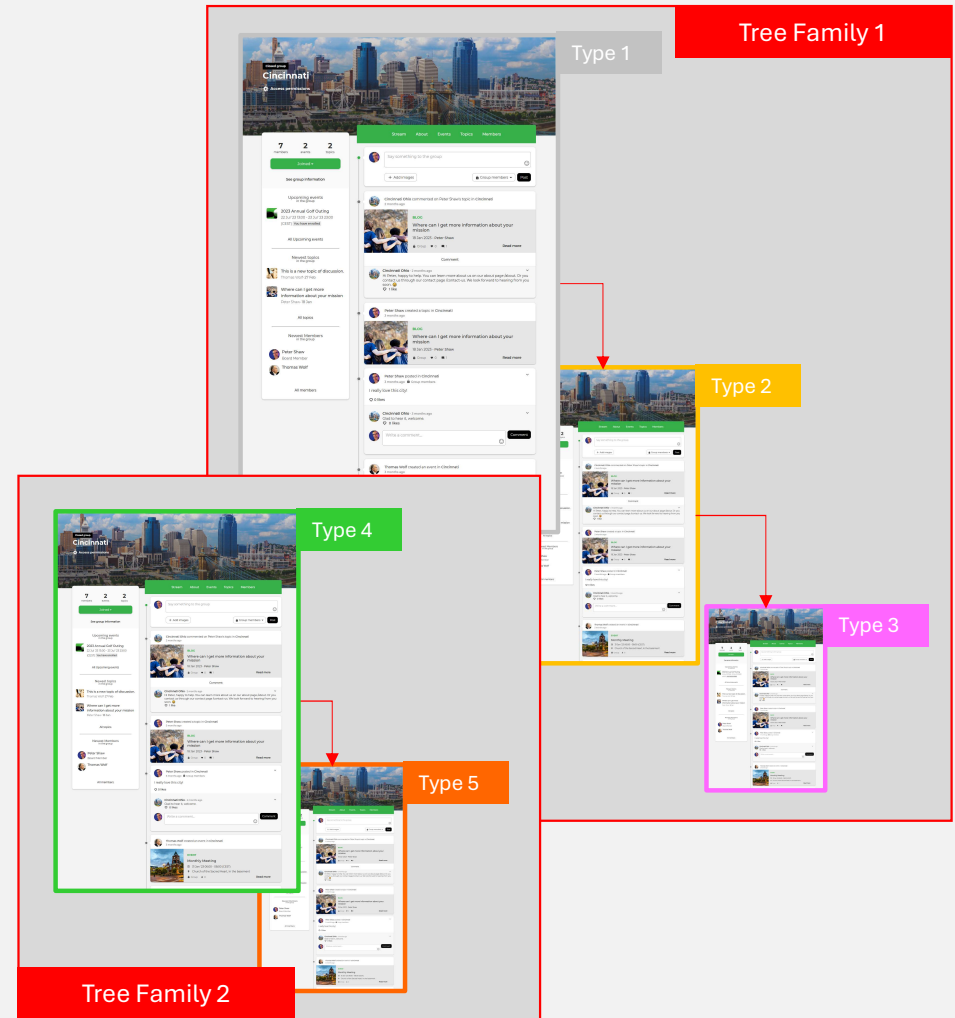

- Restrict relationships based on group types. (Only group Type 1 can be a parent of group Type 2 etc..)
- Relationships are defined from parent to one child
- When creating a relationship rule, you can specify:
 - Primary Group type
 - Secondary Group type
(all relatives within the family)
 - Action
(Share content in secondary group)
 - Content type
(Blog, Image, etc.)
 - User Role type

TREE FAMILIES

Benefits of Convene Continued:

- As group types are created rules are defined to create a Tree of information sharing (A tree family)
- Additional and separate tree families can be created at any time
- These tree families can have same or separate group types, levels, and rules that can control them
- Def: Hierarchy is a system in which entities are ranked according to levels of importance or authority. It implies a structure of subordination. It's part of the structure of a network.
EX: Organizational charts in companies, government structures, taxonomy rank, like the kingdom, phylum, class, etc.

CONVENE'S MODEL FOR UNIFICATION

OMNIPOINT 360 is a comprehensive solution that unifies disparate systems into a single data silo. This integration enhances efficiency and accelerates data summarization and presentation. Tasks and reports that typically require extensive resources are completed in seconds, saving time, money, and manpower.

OMNIPOINT 360 is the **Dynamic Directive(TM)** service solution that manages your evolving workflow with consistency and standardization, eliminating chaos. This process clarifies the necessary steps, allowing you to focus on your goals without interruption.

THANK YOU
